Effective teaching and learning process

At Maheshtala College, teachers believe that each student is unique, and that education should address distinct learning needs, capabilities, interests and aspirations. Hence, students are engaged in a wide variety of methods devising student-centric and student-friendly ways and means, allowing them ease and comfort of mother-language. The methods adopted have evolved according to the scope of the syllabus and in accordance to UGC regulations:

Learning through experience:

- Practical Classes - Students of the departments of Geography, Physics, Chemistry, Computer Science, Journalism and Mass Communication are engaged in experiential learning where teachers facilitate their learning as well as imbibing skills through experiments, using diverse instruments and gadgets.
- Study-Tour/Field work- Students of Geography and Economics get first-hand idea of the location of a place, its geographical, topological, demographic and economic aspects. The Department of Political Science take students to visit Vidhan Sabha, local Municipality office, Panchayat office to experience first-hand the democratic functionings of the government both at macro and micro-levels. Students of History department are taken to State Archaeological Museum, Alipore Museum (formerly Central Jail) and along with Bengali department students, they visit Rabindranath Tagore's ancestral house at *Jorasanko* to have exposure to the historical significance of source materials and places of interest.
- Projects and Tutorials - The cognitive acumen of students is honed and tested in the tutorial assignments of all students of the Language and Social Studies subjects. All students of the college have to complete project work and tutorial assignments on Environmental Studies.
- Mock Parliament - Students from Political Science, Journalism, English, Bengali and History departments enthusiastically participate in Mock Parliament sessions and engage in different extension activities of the T N Seshan Memorial Electoral Literacy Club.
- Alumni engaged in different professions often come and share their real-life experiences with present students

The use of innovative teaching methods (1. Flipped Classroom 2. Project-Based Learning 3. Game-Based Learning 4. Mobile Learning 5. Collaborative Learning Platforms) and technologies has increased student engagement in the learning process, leading to improved participation and motivation. Innovative teaching methods have promoted collaboration among students, encouraging them to work together and learn from each other.

* Collaborations have provided students with access to a wider range of academic programs, courses, and resources, enriching their learning experience.

Teachers use ICT- enabled tools

Teachers utilizing ICT tools revolutionize traditional education by integrating digital resources like interactive whiteboards, educational software, and online platforms. These tools facilitate dynamic and personalized learning experiences, enabling educators to engage students with multimedia content, collaborative projects, and interactive simulations. By leveraging ICT, teachers empower students to develop critical thinking, digital literacy, and problem-solving skills essential for success in today's world. Furthermore, ICT enhances accessibility, allowing students to access educational materials anytime, anywhere, and catering to diverse learning styles and needs. In essence, ICT-equipped teachers propel education into a new era of innovation, connectivity, and student-centered learning.

Study Tour/ Field Work –

Maheshtala College's Geography, History, Journalism, and other departments organize enriching fieldwork and study tours, amplifying classroom learning with real-world experiences. These excursions immerse students in diverse environments, providing first-hand insights into geographical phenomena, historical landmarks, and journalistic practices. Whether exploring local ecosystems, delving into heritage sites, or conducting interviews for news stories, these experiences deepen understanding and foster practical skills. Through fieldwork and study tours, Maheshtala College equips students with invaluable perspectives, critical thinking abilities, and professional competencies, preparing them for academic excellence and meaningful contributions in their respective fields.

Sample scanned copies of Practical notebooks showing experiments performed by the students -

Experimental Gain from Graph:-

Resistance (kΩ)	Gain	Input Voltage (V)	Output Voltage (V)	Percentage Error
1	+0.55	+3.04	+1.57	10.15
2	+0.55	+3.05	+1.58	
3	+0.1	+1.04	+0.1	
4	+0.15	+0.62	+0.09	
5	-0.3	-3.04	-0.9	
6	-0.25	-2.78	-0.7	
7	-0.1	-1.15	-0.1	
8	-0.05	-0.57	-0.03	

Discussion:-
 1) Offset null adjustment is necessary for ideal.
 2) The value of closed loop gain and the output should be so chosen that the output voltage well below the supply voltage (±5V). This makes the AOP operation over the linear region with supply the output should not exceed 3 volts.

Block diagram of Intel 8086 microprocessor:
 The diagram shows the internal architecture of the Intel 8086, including the 16-bit internal data bus, 20-bit address bus, and various control and data paths.

Stack Pointer - Stack pointer is a 16-bit register. It holds the address of the top-most cell in location of stack. To store a new data in stack the content of stack pointer is decremented by 1 and then the data is stored. Stack can be defined by programmer at any position of the available memory. To do this the programmer has to load starting address of stack in stack pointer.

Instruction Register - Instruction register is an 8-bit register. It holds the operation code which is fetched from memory. This code is sent to instruction decoder circuit for decoding and generation of machine codes. Not accessible by programmer.

Temporary Register - Temporary register is an 8-bit register. It holds intermediate data of arithmetic and logical operations. It is not accessible by programmer.
